Art Unit: 3682

The Drawings filed July 8, 2003 are objected to. Figures 1-3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 7-9, 11, and 12 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Dreschmann et al.

Claims 7-10, 12, and 13 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kajihara et al.

Claims 14 and 16 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Popa et al.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 3682

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Popa et al.

The sealed bearing of Popa includes the hole 53 and membrane 40 to equalize pressure between the inside and outside of the bearing. It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize the bearing taught by Popa in any environment requiring pressure equalization, including that of a pressurized vessel. With respect to claims 2, 4, and 15, it would have been obvious to one of ordinary skill in the art to modify the hole opening of Popa to any desired diameter.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
